## **Analyse-it Method Evaluation software - helping laboratories and IVD companies achieve regulatory compliance.**

England, UK, October 2007 – Analyse-it Software Ltd., a leading provider of statistical analysis software, today announced a major new release of the Analyse-it Method Evaluation edition.

Aimed at in-vitro diagnostic companies and clinical laboratories, Analyse-it helps meet CLIA/CAP and similar regulations for method validation. Statistics and charts are provided to validate, verify and demonstrate analytical method accuracy, precision, linearity, and reference intervals in accordance with the latest CLSI Evaluation Protocols and other industry recognised protocols.

Laboratories can establish or verify method performance when introducing a new method, or demonstrate performance is back on track after a proficiency test failure. IVD companies can evaluate diagnostic performance of a new method during the early stages of development, right through to putting together the final analytical performance claims for regulatory compliance.

Widely cited in peer-reviewed published research since 1997, Analyse-it includes many specialist clinical laboratory statistics. Speaking at the launch, Simon Huntington, Director of Analyse-it Software, said “The Analyse-it Method Evaluation edition allows our customers to satisfy 7 of the latest CLSI evaluation protocols, many of which previously could only be calculated by tedious, error-prone, hand calculation”.

###

## **About Analyse-it**

Analyse-it Software, Ltd. is the leading developer of statistical software for Microsoft Excel. Among other work we have developed custom statistical analysis software for two of the world's largest pharmaceutical & diagnostic companies. Our flagship product, Analyse-it, was released in 1997 and supported Excel 5, 95, 97, 2000, 2002, 2003 and now the new features of Excel 2007.

Analyse-it is now used by thousands of users around the world, is cited in hundreds of published peer-reviewed papers and has over 60 citations in Clinical Chemistry. It is used by many of the top 10 IVD companies including Roche Diagnostics, Abbott Laboratories, Bayer Diagnostic, Beckman Coulter, Dade Behring, Ortho-Clinical Diagnostics, bioMérieux, and Bio-Rad Laboratories.
